

Working At Height Induction

The production treats the health and safety of our staff with the utmost importance. The following requirements are designed to ensure that no crew member is placed at risk of injury or illness during their employment at any studio or location that is used during the production. You are required to read, understand and follow the requirements at all times whilst working for the production.

GENERAL ARRANGEMENTS FOR WORKING AT HEIGHT

- All crew members must report promptly to the relevant Head of Department or production H&S department any hazardous situation or defect.
- All crew members must cooperate with all H&S policies. The Line Producer and relevant Head of Department are to ensure that a safe and healthy workplace and working procedures are maintained.
- All crew members have the duty to properly use any safety equipment necessary to protect against hazards to health and safety and to follow any instructions and training they have been given.
- Any one working at height must have completed a recognised working at height training course.
- A written Risk Assessment must be completed and reviewed by the production H&S department before working at height
- A Working at Height permit must be obtained from the production H&S department before working on the gantries
- All areas under the work taking place must be barriered off before work commences
- A visual inspection must be completed before using any MEWPS
- A verbal brief must be given to anyone working in the same space to let them know what you are going to do
- All harnesses and PPE must be worn as identified in the risk assessment, HARNESS MUST ALWAYS BE WORN in a cherry picker.

RESCUE PLAN

- Make sure you have a rescue plan in place when working in the gantries
- Make sure someone knows how to lower a MEWP if you were to get stuck
- NEVER work alone
